## **Are you living with SCI/MS/MND/ post stroke ?**

The Australian Lymphoedema, Education, Research and Treatment Centre (ALERT) is currently conducting a study exploring the lived experience of peripheral oedema in people living with acquired neurological conditions affecting the central nervous system.

Sharing your lived experience is the first step in understanding the need for more research, education, earlier monitoring for oedema and developing suitable intervention strategies. This survey will take approximately 10-15 minutes.
