

Is multiple sclerosis muscle weakness impacting your life?

If you have weakness, we would like to know more about you!

Project Title: Asymmetry of Muscle Activation in People with Multiple Sclerosis

We are looking to recruit adults who have relapsing-remitting multiple sclerosis.

This research project will determine if your differences in muscle weakness in your left and right side align with changes that are occurring in your neuromuscular system.

Participants will be asked to attend our laboratory on one occasion.

This session will be at Griffith University on the Gold Coast campus, and will require about two hours of your time.

Are you eligible?

- 20 to 65 years old
- No MS-related relapses in 3 months
- No other neurological illnesses aside from MS
- No current musculoskeletal injuries

Compensation

To show our appreciation for your time and effort you will get a \$100 Coles or Woolworths gift voucher for the session.

This project has been approved by the Griffith University Human Research Ethics Committee (Ref: 2025/347).
